

Mass Balance – Problem Section Content

Source: Elementary Processes of Chemical Engineering, Felder, R; 3rd edition.

www.ChemicalEngineeringGuy.com/

Mass Balance is an important subject, which is the key for a chemical engineer to continue his academic and professional education.

Mass Balance Theory and little problems is **NOT** enough to understand Mass Balance completely.

If you want to master this subject you need to work in many problems and complex problems. I have included in the course many **pair problems** from the textbook: Elementary Processes of Chemical Engineering, Felder, R; 3rd edition. Solving some of these will help you understand more the concept of Mass Balancing. Solving ALL of them will be the ideal case, you will truly understand many processes and how to understand and solve such problems. Click **here** to see the promo video for the problem section!

MB1-Chapter 4: Introduction to Mass Balance

Go to Webpage [here](#)

- [4.02](#) Continuous Tank Reaction Mass
- [4.04](#) Labeling streams in Mass Balance
- [4.06](#) Analysis of Degrees of Freedom in a Distillation Column
- [4.08](#) Mass Balance in an Egg Factory
- [4.10](#) Mixture of Ethanol Solutions - Mass Balance
- [4.12](#) Mass Balance on a Distillation Column
- [4.14](#) Humidification of Air - Mass Balance
- [4.16](#) Mixture of H₂SO₄ solutions - Mass Balance
- [4.18](#) Wet Sugar Production in Mass Balance
- [4.20](#) Drying of Air with Calcium Chloride Pellets - Mass Balance
- [4.22](#) Mixture of Hydrogen Tanks for Final Product - Mass Balance
- [4.24](#) Flow of CO₂ in a Pipeline - Mass Balance
- [4.26](#) SO₂ Scrubbing Operation in Mass Transfer - Mass Balance
- [4.28](#) Multiple Unit Mass Balance
- [4.30](#) Concentration of Seawater Brine - Multiple Units
- [4.32](#) Production of Juice Concentrate - Bypass Mass Balance
- [4.34](#) Crystallization of Potassium Sulfate - Multiple Units
- [4.36](#) Extraction of Bean Oil by Hexane - Multiple Units
- [4.38](#) Extraction of Drug in multiple stages - Multiple Units
- [4.40](#) Mass Balance using Stoichiometry in a Nitric Oxide Reaction
- [4.42](#) Production of Ethyl Bromide - Reactions in Mass Balance
- [4.44](#) Production of TiO₂ with sulfuric Acids - Multiple Reaction Mass Balance
- [4.46](#) Production of Methyl Acetone – Equilibrium
- [4.48](#) Production of Methanol in Equilibrium - Extent of Reaction
- [4.50](#) Production of Monochloroethane and Dichloroethane - Multiple Reactions
- [4.52](#) Production of Hydrogen Fluoride - Multiple Reactions
- [4.54](#) Extent of reaction in Equilibrium reactions – Equilibrium
- [4.56](#) Formaldehyde production - Reaction Mass Balance
- [4.58](#) Production of Methyl Chloride - Reactions in MB
- [4.60](#) Methanol Production with Purge and Recycle Systems - Purge and Recycle
- [4.62](#) Production of Iso-octane - Multiple Units and Reaction
- [4.64](#) Wet and Dry gas Basis – Combustion
- [4.66](#) Combustion of a Carbon Monoxide and Hydrogen Fuel
- [4.68](#) Butane Combustion cases for conversion and excess air – Combustion
- [4.70](#) Combustion of n-Pentane in Excess – Combustion
- [4.72](#) Gas Chromatography of Methane and Ethane – Combustion
- [4.74](#) Incomplete Combustion of a Fuel Oil – Combustion
- [4.76](#) Proximate Analysis of a Wet Coal – Combustion
- [4.78](#) Scrubbing of a Stack Gas containing SO₂ – Combustion
- [4.80](#) Combustion of a CpHqOr Fuel Oil - Combustion

MB2-Chapter 5: Single-Phase Mass Balance

Go to Webpage [here](#)

- [5.02](#) Bulk and Absolute Densities - Liquid and Solids
- [5.04](#) Density of a Slurry - Liquid & Solids
- [5.06](#) Ideal Gas Calculation - Ideal Gas
- [5.08](#) Ideal Gas Constant Exercise - Ideal Gas
- [5.10](#) Stream of Air flowing in a Tube - Ideal Gas
- [5.12](#) Unknown Tank Gas - Ideal Gas
- [5.14](#) Flow rate for Gas Density - Ideal Gas
- [5.16](#) Mixture of Gas Streams - Ideal Gas
- [5.18](#) Specific Gravity of Gases - Ideal Gas
- [5.20](#) Mixture of Gases - Ideal Gas
- [5.22](#) PPM of Benzene in Lab - Ideal Gas
- [5.24](#) Gas stealing company - Ideal Gas
- [5.26](#) Gas Dilution in Furnace - Ideal Gas
- [5.28](#) Draft Stack Model - Ideal Gas
- [5.30](#) Combustion of a Gas - Ideal Gas
- [5.32](#) Oxidation of Nitric Oxide - Ideal Gas
- [5.34](#) Silicon Dioxide Production - Ideal Gas
- [5.36](#) Hydrazine as a Propellant - Ideal Gas
- [5.38](#) Hydrogenation of Propylene - Ideal Gas
- [5.40](#) Vaporization of Acetone by Nitrogen - Ideal Gas
- [5.42](#) Chlorine tank - Ideal Gas
- [5.44](#) Portland Cement Production - Ideal Gas
- [5.46](#) Pentane Combustion and Condensation - Ideal Gas
- [5.48](#) Production of Sulfuric Acid - Ideal Gas + Equilibrium
- [5.50](#) Hydrogenation of a Compound in Equilibrium - Ideal Gas + Equilibrium
- [5.52](#) Gases in Multiple Equilibriums
- [5.54](#) Production of Methanol - Ideal Gas + Equilibrium
- [5.56](#) Volume of a Gas Mixture - Truncated Virial Equation
- [5.64](#) Compressibility Factor Z - Real Gases
- [5.66](#) Compressibility Factor of CO₂ - Real Gases
- [5.68](#) Compressibility of Oxygen - Real Gas
- [5.70](#) Nitrogen Purging System - Real Gases
- [5.72](#) Liquid Nitrogen Flashing - Real Gas
- [5.74](#) Mixture of Gases using Kay Rule - Real Gases
- [5.76](#) Compression of a Mixture of Gases - Real Gases
- [5.78](#) Methanol Production - Real Gases
- [5.80](#) Mixture of Gases flowing in a Pipe - Real Gases
- [5.82](#) Mass Balance in Analytical Chemistry - Real Gases

MB3-Chapter 6: Multiple-Phase Mass Balance

Go to Webpage [here](#)

- [6.02](#) Chloroform in a container – Vapor Pressure
- [6.04](#) Semilog Plot of Clasius Clapeyron Equation - Vapor Pressure
- [6.06](#) Analysis of Ethylene Diamine by Clasius Clapeyron - Vapor Pressure
- [6.08](#) Vapor Pressure of a Gas in a Flask - Vapor Pressure
- [6.10](#) Lower Flammable Limit of Methanol - Vapor Pressure
- [6.12](#) Evaporation of Chlorobenzene - Vapor Pressure
- [6.14](#) Buoyancy of a Ball in Humid Air - Vapor Pressure
- [6.16](#) Potable Water System - Vapor Pressure
- [6.18](#) Condensation System for Air - Vapor Pressure
- [6.20](#) Octane Discharge - Vapor Pressure
- [6.22](#) Vapor Pressure of a Mixture of Hexane - Antoine Equation
- [6.24](#) Nonane tank ignition - Vapor Pressure
- [6.26](#) Acetone Recovery - Vapor Pressure
- [6.28](#) Air Conditioner Condensation - Vapor Pressure
- [6.30](#) Hygrometer Calculation for Air Conditioning - Vapor Pressure
- [6.32](#) Condensation of Methanol in a Stream Gas - Vapor Pressure
- [6.34](#) Wet Leather drying - Vapor Pressure
- [6.36](#) Solid + Toluene treatment for Drying - Vapor Pressure
- [6.38](#) Burning of Ethane and Ethane - Vapor Pressure
- [6.40](#) Propane Absorber – Raoult Law
- [6.42](#) Production of Nitric Acid - Vapor Pressures
- [6.44](#) Production of Sulfuric Acid - Vapor Pressure
- [6.46](#) Gas Container Composition Calculation - Raoult Law
- [6.48](#) Methane and Water Tank solution - Henry Law
- [6.50](#) Amount of CO₂ contained in a Soda Can - Henry Law
- [6.52](#) Finding the Temperature in a Styrene-Toluene System - Raoult Law
- [6.54](#) Volatile Hydrocarbons in a Tank - Cox Diagrams
- [6.56](#) Evaporation of Toluene and Benzene - Raoult Law
- [6.60](#) Distillation of Pentane and Hexane - Vapor Pressure and Raoult Law
- [6.66](#) Using Pxy Diagrams for Toluene and Benzene Mixtures - Pxy Diagrams
- [6.68](#) Using Txy Diagram for Acetone and Ethanol Mixtures - Txy Diagrams
- [6.70](#) Calculation of Boiling Point of Mixture - Raoult Law
- [6.72](#) Dehydration of Natural Gas with TEG - Vapor Pressure
- [6.74](#) Crystallization of a Salt by Temperature - Solubility Equilibrium
- [6.76](#) Solubility of a Salt in a Solvent - Solubility Equilibrium
- [6.78](#) Crystals of a Slurry of KNO₃ - Solubility Equilibrium
- [6.80](#) Crystallization of Potassium Dichromate - Solubility Equilibrium
- [6.82](#) Production of MgSO₄ from ore - Solubility Equilibrium
- [6.88](#) Extraction of Styrene in Ethyl benzene and Ethylene Glycol - Liquid Liquid Equilibrium
- [6.90](#) Extraction of Acetone with Hexane or Benzene - Liquid Liquid Equilibrium

MB4-Chapter 11: Mass Balance in Transient State

Go to Webpage [here](#)

[11.02](#) Phosphoric Acid Tank - Transient State

[11.04](#) Air Filled Tank - Transient State

[11.06](#) Filling Tank - Transient State

[11.08](#) SO₂ Leak in Lab - Transient State

[11.10](#) Salt Tank - Transient State

[11.12](#) Enriched Oxygen Tank Filling - Transient State

[11.14](#) Batch Reactor - Transient State

[11.16](#) Michaelis Menten Enzyme Reaction - Transient State

[11.18](#) CO₂ Absorber Tank - Transient State

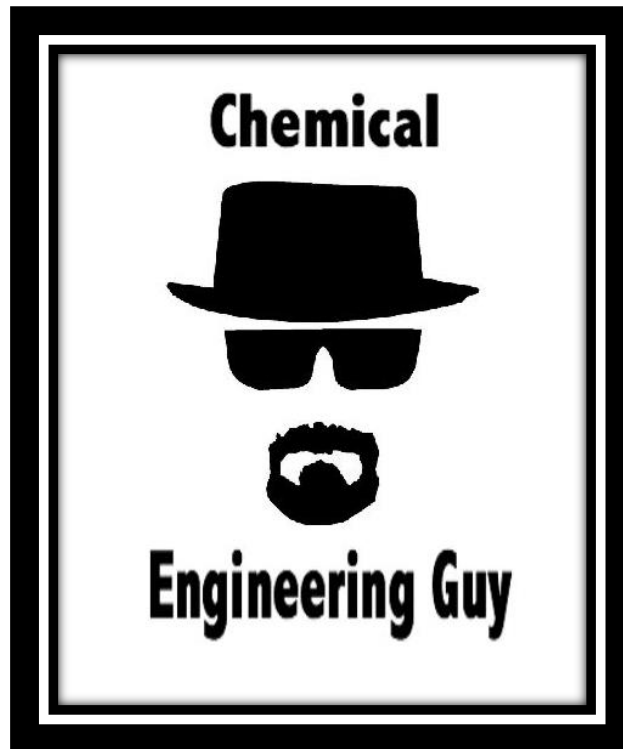

Ending Notes

I recommend you to do ALL the problems. You may always search for support in the “comment” section in each problem. Please be specific of your question/doubt.

I will even add videos for extra information or explanations on that problem.

If you liked the problem section and would like more problems, please contact me.

Have any doubts? Send me an e-mail me at chemical.engineering.guy@gmail.com
